DETAILED ACTION

Election/Restrictions

1. Claims 1, 4-12, 25 and 29 are allowable. The restriction requirement, as set forth in the Office action mailed on 12/28/2007 has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claim 4-5, and 8-12, directed to Species II-VI no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

2. Claims 1, 4-12, 25 and 29 are allowed.
3. The following is an examiner's statement of reasons for allowance:
4. With respect to claim 1, the prior art of record fails to teach:

a current-drive apparatus for a display panel, comprising:

a plurality of current-drive circuits, each of said plurality of current-drive circuits including first and second terminals, a reference resistor connected between said first and second terminals and a reference current generation circuit to produce at least one internal reference current responding to a voltage generated based on the reference resistor; and

a current source, said current source and said plurality of current-drive circuits being connected such that a current flowing through said current source becomes substantially equal to a current flowing through said reference resistor of each of said current-drive circuits, wherein a current flowing through said reference resistor in a first one of said current-drive circuits flows through said reference resistor in a second one of said current-drive circuits,

wherein said current drive circuits are coupled in series in a manner that said first terminal of a preceding one of said current drive circuits is connected to the second terminal of a succeeding one of said current-drive circuits which is adjacent to the preceding one of said current-drive circuits, and

wherein at least one of said plurality of current-drive circuits further includes- a first reference MOS transistor:

a first operational amplifier having a first input coupled to a first node between said first terminal and said reference resistor and a second input coupled to an output thereof;

a second operational amplifier having a first input coupled to a second node between said second terminal and said reference resistor, a second input coupled to a drain of said first reference MOS transistor, and an output coupled to a gate of said first reference MOS transistor; and
one a current adjustment resistor connected between the drain of said first reference MOS transistor and the output of said first operational amplifier, [[and]] wherein said at least one current adjustment resistor operates such that a reference voltage generated based on a voltage at both ends of said reference resistor is applied across said current adjustment resistor to generate an internal reference current through said first reference MOS transistor.

5. In regards to claim 25, the prior art fails to teach a current-drive system for a display panel, *comprising: first and second power source lines; a plurality of current-drive ICs, each of said plurality of current-drive ICs having first and second terminals and having a first resistor connected between said first and second terminals; and*

a current source connected to said plurality of current-drive ICs so that said ICs and said current source are connected in cascade with said first and second terminals between first and second power source lines,

wherein said ICs are coupled in series between said first power source line and said current source in such a manner that the second terminal of a preceding one of said ICs is connected to the first terminal of a succeeding one of said ICs,

wherein at least one of said plurality of current-drive ICs further includes- a reference MOS transistor;

a first operational amplifier having a first input coupled to a first node between said first terminal and said reference resistor and a second input coupled to an output thereof;

a second operational amplifier having a first input coupled to a second node between said second terminal and said reference resistor, a second input coupled to a drain of said reference MOS transistor, and an output coupled to a gate of said reference MOS transistor; and

a second resistor connected between the drain of said reference MOS transistor and the output of said first operational amplifier.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
